

HIMA Prooftest Reporting — at a glance

Automatic proof-test records and reports from your station · Version 1.77 · 2026-08-20

One sentence

When a proof test finishes, the tool automatically saves the results and creates the report. SILworX/devices run the test; this tool watches, stores, and reports.

Does / Does not

Does: watch devices, detect start/end, save results, create HTML/PDF, local screen.

Does not: run the HART test, replace SILworX, close the engineer's project on Disconnect, quit SILworX.

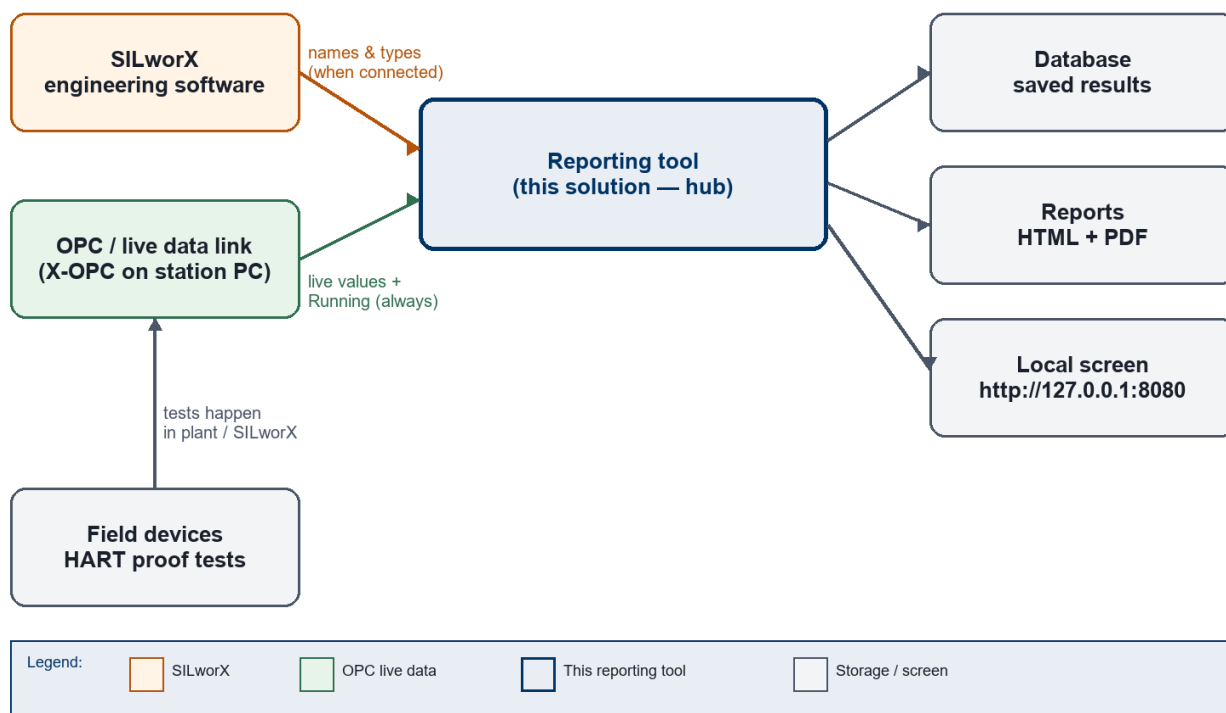

Connect vs Disconnect

Connect = link this tool to SILworX for names/types. **Disconnect** = unlink this tool only. Watching continues via OPC (live data link).

Where to open

Local browser <http://127.0.0.1:8080> on the station PC. Reports under C:\HIMA Prooftest Reporting Tool\...

Architecture — who talks to whom

Caption: Live values always come from OPC. SILworX only helps identify devices when the tool is connected.

Operators: see OPERATOR-CONNECT-DISCONNECT.md
